To Whom It May Concern:

I have known Oleg Kryachun for approximately two years, while he had been studying Computer Science at Clark College. During this time, he completed his Associates Degree with focus on Computer Science and transferred to Washington State University in order to complete his Bachelors Degree. I had served as his academic advisor and instructor for Digital Systems and Microprocessor course sequence while at Clark College.

Oleg consistently ranked amongst the top 15% of students in my classes and actively participated in classroom discussion. Oleg has strong communication skills, high initiative and is an excellent team player.

He is a highly motivated and committed student who has demonstrated his ability to independently learn new concepts and apply them. In addition to his course work, Oleg independently developed LZW file compressor and external battery charging device. Not only he is an excellent programmer, but Oleg is able to learn new skills needed to complete his projects. He demonstrated this ability during the development of external battery charging project where he designed electrical circuits and mechanical parts to complete the project.

Oleg is well positioned to succeed in his education and is well on his way to become an excellent Computer Scientist. I highly recommend Oleg.

Please feel free to contact me if you need additional information.

Respectfully yours,

Izad Khormae
Professor / Dept. Chair
Computer Science and Engineering Department
